

Vision™ Plus Air Handler for High Static Pressure, Low Leakage Applications

Vision™ Plus

900-100,000 cfm

HVAC System Type

Indoor air handler.

Building Application

Ideal for applications like healthcare facilities, clean-rooms and labs that require increased filtration.

Featuring

Low leakage construction with up to +/-8" of internal static pressure, 2" Variable Dimensioning™, modular design, foam injected panels, multiple filter and energy recovery options, stacked and side-by-side configurations, fixed plate heat exchangers, UV lights, sloped drain pan, anti-microbial liner, and much more.

Benefits

Spec high filtration job applications with industry leading energy efficiencies for cost saving solutions!

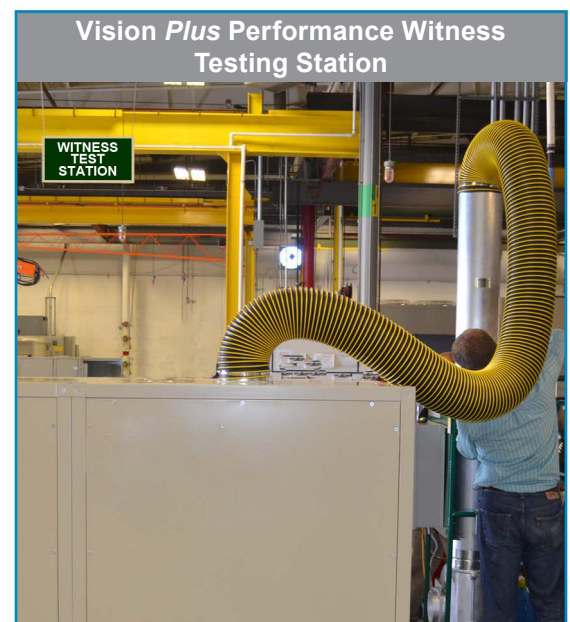

Overview

Daikin McQuay Vision air handlers always provide building owners with an excellent solution in high static pressure, low leak applications. And our new Vision Plus air handler does even more. Vision Plus provides the ability to attain a maximum of Class 6 leakage at up to +/-8" of internal static pressure per ASHRAE's 111 Standard, which is well under the industry's high performance leakage standard of one percent.

Vision Plus' unique variable dimensioning of up to 2" increments, modular design, and best in class fan performance provides an economical, energy efficient, and out-of-box solution for demanding applications that are commonly encountered when advanced filtration and energy recovery are required.

Designed and engineered for the flexibility and performance you demand, Vision Plus offers a proven, high quality, sustainable design for increasing occupant health and comfort, with industry leading energy efficiencies and lots of options for cost saving solutions.

Daikin McQuay backs the outstanding performance of all Vision Plus units by offering a performance witness test option. For more information, contact a McQuay applied air handling applications engineer.

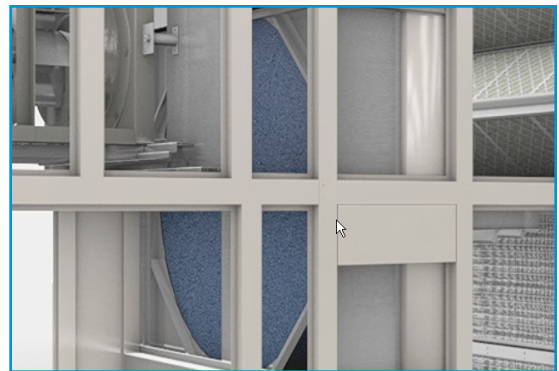

Vision *Plus* Fan Options...

Energy Recovery and Configuration Options...and Much More!

In addition to selectable fan options, Vision *Plus* also provides multiple energy recovery options and configurations to give your system the best possible fit for your application. Options like fixed plate heat exchangers and energy recovery wheel selections can help increase unit efficiency and can be incorporated into stacked and side-by-side arrangements to minimize footprint.
