

## CASE STUDY

# McQuay PTAC Units Turn Mont Tremblant Into The Peak Of Comfort

*The McQuay PTAC units were chosen for this premier vacation spot because of their flexibility.*

Canada's Mont Tremblant is a unique blend of the restoration architecture of Old Quebec City and Old Montreal—with all the modern conveniences. A combination of world class skiing in the winter, with a championship golf course in the summer, and the charm of Quebecois village, Mont Tremblant is designed to create an atmosphere of luxury and comfort all year round.

At the heart of this unique village, Le Kandahar condominium and hotel units and retail space features all the amenities needed for year round comfort—including McQuay Package Terminal Air Conditioning units.

The McQuay PTAC units were chosen for this premier vacation spot because of their flexibility. Designed to provide four season air conditioning, this completely decentralized system allows the inhabitants to choose the temperature that's most comfortable for them.

Quiet and good looking the McQuay PTAC units add style and class to every room, without adding

*Mont Tremblant's Kandahar Hotel and Condominiums.*

the noise that's often associated with PTAC units. Two high-efficiency motors and two quiet running centrifugal fans provide dependable temperature control and low sound levels.

In addition, McQuay was able to supply all 239 PTAC units within the tight time frame (between 8 and 12 weeks) that the job required. With McQuay's Auburn, New York factory stocking program and the

cooperation of McQuay representatives, all the units were factory tested and delivered to Mont Tremblant in record time.

So far, the building owners and management of Le Kandahar are pleased with the quality and stylish good looks of the unit. And McQuay is pleased to have played a role in making this exceptional resort the peak of comfort all year round.
